

Altus Windows Sill Protectors Q&A

Making a property weathertight is a critical milestone during construction. It signifies the building is now sealed against wind and rain and the next financial payment will soon be released from the owner.

Once joinery is installed the last thing you need is for it to be damaged. That's where Altus Windows Sill Protectors come in. They're designed to safeguard against any delay caused by damage during the remaining building process.

▶ What is the product and when can I get it?

1. Altus Windows Sill Protectors for the Weathertight system, available through Bradnam's and Nulook from **March 2019**.
2. Altus Windows Sill Protectors for the Pacific Residential system, available through Fisher®, Nebulite®, Rylock® and Vistalite® from **May 2019**.

▶ What does it do?

Simply – it prevents scuffs, scratches and dents in newly installed joinery. Altus Windows Sill Protectors are the industry-leading solution designed to prevent damage to door sills before it happens, saving you time and money. **Note: the Altus Sill Protector will help safeguard your Altus door sills but does not guarantee total protection.**

▶ Why can't I get Sill Protectors for Pacific Residential now?

The Altus Windows Weathertight system underwent in-market, localised testing so we could make adjustments in a controlled environment. This allowed us to ensure the performance of the product ahead of developing it for the Pacific Residential system.

▶ What are they made from?

Fully recyclable PVC.

▶ How are they applied?

Arriving with your aluminium joinery, Altus Windows Sill Protectors come pre-cut and simply clip into place. (Refer to aluminium cross section samples and demonstrate).

▶ How do I get them off at the end of the job?

Altus Windows Sill Protectors clip on and off easily. No tools required. (Refer to aluminium cross section samples and demonstrate).

▶ Will they stop me locking up the site at the end of the day?

No. Altus Windows Sill Protectors are designed to fit snugly without disrupting the opening and closing of doors. And, unlike taped down cardboard, they're made to last the entire duration of the construction.

▶ What weight do they take?

Extensive use on major project sites has shown our sill protectors to be sturdy enough for heavy foot traffic and wheelbarrow use.

▶ What else do I need to do?

Using our sill protectors couldn't be easier. Simply clip them on, leave them and when construction is complete unclip them and recycle.

▶ Why are they orange?

There's no chance of missing our sill protectors – they're bright orange to provide a visual reminder to take care when walking over a sill.

▶ How much do they cost?

Approximately \$25-30 per opening, however, the cost will vary depending on the size of the opening. Your Altus Windows Systems Supplier will be happy to discuss these costs with you.

▶ Where do I get them from?

Direct from your Altus Windows Systems Supplier along with any other joinery requirements.

▶ Where can I see them?
